

Java

```
class Solution {  
    public String generateTag(String caption) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {string} caption  
 * @return {string}  
 */  
var generateTag = function(caption) {  
  
};
```

TypeScript

```
function generateTag(caption: string): string {  
  
};
```

C++

```
class Solution {  
public:
```

```
    string generateTag(string caption) {  
    }  
};  
-----
```

C#

```
public class Solution {  
    public string GenerateTag(string caption) {  
    }  
}
```

Kotlin

```
class Solution {  
    fun generateTag(caption: String): String {  
    }  
}
```

Go

```
func generateTag(caption string) string {  
}
```
